July 1998

Installation Summaries From the 1997 Survey of Threatened and Endangered Species on Army Lands

by
Rachel A. Shaw, Eric R. Schreiber, Alison Hill, and Mary A. Reed

19980909 017

The Army's Environmental Quality Review (EQR) is a means by which installations report annually to Army Headquarters (HQDA) on a variety of natural resource and environmental issues. Data from the Threatened and Endangered Species (TES) portion of the 1997 EQR is summarized in this report. Installation-level data provides information on all species that occur on each installation, while species-level data lists all installations on which each species occurs. Corresponding information on such topics as Federal status, category of

species, critical habitat, informal consultations with the U.S. Fish and Wildlife Service (USFWS), and biological opinions rendered by USFWS is provided for each species.

Additional information on the status of endangered species management plans (ESMPs), planning level surveys (PLSs), and points-of-contact is available for each installation.

Please take a few minutes to answer the questions below, tear out this sheet, and return it to USACERL. As user of this report, your customer comments will provide USACERL with information essential for improving future reports.

1. Does this report satisfy a need? (Comment on purpose, related project, or other area of interest for which report will be used.)

2. How, specifically, is the report being used? (Information source, design data or procedure, management procedure, source of ideas, etc.)

3. Has the information in this report led to any quantitative savings as far as manhours/contract dollars saved, operating costs avoided, efficiencies achieved, etc.? If so, please elaborate.

4. What is your evaluation of this report in the following areas?

a. Presentation: _____

b. Completeness: _____

c. Easy to Understand: _____

d. Easy to Implement: _____

e. Adequate Reference Material: _____

f. Relates to Area of Interest: _____

g. Did the report meet your expectations? _____

h. Does the report raise unanswered questions? _____

i. General Comments. (Indicate what you think should be changed to make this report and future reports of this type more responsive to your needs, more usable, improve readability, etc.)

5. If you would like to be contacted by the personnel who prepared this report to raise specific questions or discuss the topic, please fill in the following information.

Name: _____

Telephone Number: _____

Organization Address: _____

6. Please mail the completed form to:

Foreword

This study was conducted for the U.S. Army Environmental Center (AEC) under Military Interdepartmental Purchase Request (MIPR) No. 8203; Work Unit NT8, "Analysis and Reporting of TES Information From FY97 EQR." The technical monitors were Mr. Scott Belfit and Ms. Mary Reed, SFIM-AEC-ECN.

The work was performed by the Natural Resource Assessment and Management Division (LL-N) of the Land Management Laboratory (LL), U.S. Army Construction Engineering Research Laboratories (USACERL). Mary A. Reed, U.S. Army Environmental Center, assisted in the technical review. The USACERL Principal Investigator was Dr. Alison Hill. Dr. Balbach is Chief, CECER-LL-N, and Mr. John T. Bandy is Acting Laboratory Operations Chief, CECER-LL. The USACERL technical editor was Gloria J. Wienke, Technical Information Team.

COL James A. Walter is the Commander of USACERL, and Dr. Michael J. O'Connor is Director.

1 Introduction

Background

The Army's primary mission is to provide for the national defense. However, as a Federal agency, the Army is also required to protect the Threatened and Endangered species (TES) that occur on the same lands where training of soldiers and testing of weapons are carried out. Regular data collection efforts provide the Army with information that it needs to monitor and manage TES and their habitats. Every year, installations are asked to provide Army Headquarters (HQDA) with a list of TES occurring within their boundaries and on surrounding lands, and to respond to a series of questions about these species. This information gives the Army the ability to assess the status of its TES nationwide, to plan for expenditures related to TES, and to deal proactively with any potential conflicts between TES and the military mission. The information collected will also be of use to the Major Commands (MACOMs) and individual installations in planning for and managing TES.

Objectives

The objective of this research was to analyze TES information from the 1997 Environmental Quality Review (EQR) survey. This data will help the Army plan how best to comply with its obligations under the Endangered Species Act (ESA) while carrying out its military mission.

Approach

Past TES data collection efforts have included a survey that was administered directly to installations. In fiscal year (FY) 1997, data on TES were obtained by extracting information from the EQR, which contains questions on a broad range of environmental and natural resource issues, including TES. Installations were

able to enter their responses to the EQR directly into a database via the Army's Defense Environmental Network and Information Exchange (DENIX).*

Questions on TES included Federal status, presence of critical habitat, number of informal consultations and biological opinions, and total expenditures for each species on the installation. Information was also collected on the status of the installations' Endangered Species Management Plan (ESMP) and Planning Level Survey (PLS), covering all species on the installation. Responses from the TES portion of the EQR were sent to USACERL for data cleaning and analysis. Installations were re-contacted by phone to verify their answers during the data cleaning phase.

Preliminary tables with Army-wide and MACOM breakdowns of the EQR97 TES information were sent to each MACOM for review.

Scope

The intended scope of this survey was all Army installations with onsite or contiguous species that were listed in the Federal Register in late 1997 as Threatened, Endangered, Proposed Threatened, Proposed Endangered, or Candidate species. As in previous survey years, a few installations did not respond. Some smaller installations may have lacked the technology to report data via DENIX. For practical purposes, the survey results may be taken as representing a nearly complete census of Army installations with TES species.

Mode of Technology Transfer

HQDA and MACOMs were provided cleaned and verified data in Excel 5.0 format from the EQR97 survey. This gives them the means to conduct additional analysis beyond that provided in this summary report. Preliminary tables, including some not found in this report, were provided as hard copy. The present report can be downloaded from the USACERL web page; <http://www.cec.army.mil>. Subsequent publications will provide trend information.

* DENIX has both public web pages and pages restricted to DOD-authorized users. The DENIX homepage can be accessed at <http://www.denix.osd.mil>.

2 Definitions

Biological Opinion – The document that states the opinion of the U.S. Fish and Wildlife Service (USFWS)/National Marine Fisheries Service (NMFS) as to whether or not a Federal agency's proposed action is likely to jeopardize the continued existence of a listed species or result in the destruction or adverse modification of critical habitat.

Category – Species are divided into the following categories in this report:

amphibians	birds
clams	crustaceans
fish	insects
mammals	plants
reptiles	snails

Critical Habitat – An area determined by the USFWS/NMFS to be critical to the survival of a species. Under certain circumstances, critical habitat may be designated in an area deemed favorable for the species, but where the species is not known to occur. Only a small number of the species with critical habitat actually have such habitat designated on Army installations.

Distinct Species – The term distinct species refers to the fact that a species may occur on many installations, but it is only counted once for purposes of assessing the number of species found Army-wide. For example, species X may be found on five installations, but when the total number of species is presented, species X is only counted once.

ESMP – Endangered Species Management Plan. A plan developed in accordance with Army Regulation (AR) 200-3, Chapter 11, for the management of listed or proposed species or critical habitat.

Expenditures – The total cost for managing each Federally listed Threatened or Endangered species for which funds were expended during the reporting fiscal year. Guidelines for reporting TES expenditures are provided by the USFWS. Guidance is based on the notion of "reasonably identifiable Federal Expenditures made primarily for the conservation of endangered and threatened species pursuant to this [Threatened and Endangered Species] Act."

Federal Status

- E – Federally Endangered
- T – Federally Threatened
- PE – Federally Proposed as Endangered
- PT – Federally Proposed as Threatened
- C – Candidate for Federal Listing
- C(w) – Candidate Species whose listing is “warranted but precluded” by other listing activity in the past year. No distinction is made between C and C(w) for reporting purposes.

Federal Action [Proposed Action] – Any activity permitted, funded, or conducted by a Federal agency.

Formal Consultation – The process between USFWS/NMFS and a Federal agency that commences when the Federal agency determines its action may affect a listed species or critical habitat. The Federal agency then submits a written request for consultation with USFWS/NMFS. The process concludes with the issuance of a Biological Opinion from the USFWS/NMFS, stating whether or not the action is likely to result in jeopardy to the species or adverse modification of critical habitat.

Informal Consultation – The informal consultation process precedes formal consultation and may be requested by the Federal agency, a designated non-Federal representative, or other applicant. Informal consultation may include such topics as which species occur in the proposed action area, and what effect the action may have on listed species or critical habitats. Informal consultation often concludes with USFWS/NMFS providing written concurrence with the Federal agency's determination that its action is not likely to adversely affect listed species or critical habitat.

Installation – The term installation includes active military installations, state National Guard Bureau (NGB) offices, NGB training sites, depots, Army ammunition plants, and regional support centers for the Army Reserve. Analyses in this report do not make a distinction between the various types. In some cases it was difficult to define “installation” data because some NGB state offices, for example, reported on an individual basis, while others reported at the state level.

Jeopardy Biological Opinion – A Biological Opinion issued by the USFWS or NMFS stating that a proposed action is likely to jeopardize the continued existence of listed species or result in the destruction or adverse modification of critical habitat.

Non-jeopardy Biological Opinion – A Biological Opinion issued by the USFWS or NMFS stating that a proposed action may affect, but is not likely to jeopardize the continued existence of listed species or result in adverse modification of critical habitat.

PLS – Planning Level Survey. An installation-wide inventory used to characterize essential components of the installation natural resources (e.g., landform, soil, water, and biota). Planning level surveys for TES include, at a minimum, a map showing the kinds and known distribution of TES on the installation.

Species Occurrence – An occurrence is equivalent to an individual record. For example, a TES that occurs on three installations is recorded as having three occurrences.

S/A – Similarity of Appearance. A species that closely resembles a threatened or endangered species may be given the Federal status of the species it resembles. Similarity of Appearance species are denoted with a T(S/A) or E(S/A). However, no distinction is made between S/A and TES for reporting purposes.

Species Location

Contiguous – Species known to occupy or otherwise use habitat adjacent to an installation, which may be affected by installation military activities and land management practices. Contiguous species are of concern to installations because of the possibility that they may at some future time be found on the installation.

Onsite – Species that have been documented on the installation.

TES – Threatened and Endangered Species. The term TES includes all Federally Threatened, Endangered, Proposed, and Candidate species on Army lands.

3 Changes in Federal Status From 1996

Delisted Species

Two species were delisted from the 1997 Federal Register that were reported from Army installations in the 1996 TES survey (Schreiber et al. 1997). These species include the American alligator (*Alligator mississippiensis*) and the Ramsey canyon leopard frog (*Rana subaquavocalis*). Based on the 1996 TES survey, 9 installations were affected by delisting the American alligator, and 1 installation was affected by delisting the Ramsey canyon leopard frog.

Species With a Changed Federal Status

A total of 34 species found on Army lands have changed Federal status since the 1996 TES survey (Table 1). These include 29 plants, 2 reptiles, 1 insect, 1 mammal, and 1 bird species. Only 2 of these species had a decrease in status (i.e., went to a lower category of endangerment); the remaining 32 species had an increase in status. Of the 32 species that increased in status, 27 were PE species whose status changed to E in 1997; the majority of these were Hawaiian plants.

Table 1. Species with a different Federal status from that reported in 1996.

4 Summary Information

Installation Information

A total of 105 installations responded to the 1997 TES portion of the EQR, by reporting that they had either onsite or contiguous species. Of those responding, 93 installations (89%) reported onsite TES, and 12 installations (11%) reported having only contiguous species (Table 2).

The 105 installations with onsite or contiguous TES include: 31 Army National Guard (ARNG), 28 Army Materiel Command (AMC), 14 Training and Doctrine Command (TRADOC), 13 Forces Command (FORSCOM), 9 U.S. Army, Pacific (USARPAC), 5 U.S. Army Reserve Command (USARC), 2 Military District of Washington (MDW), 1 Medical Command (MEDCOM), 1 Military Traffic Management Command (MTMC), and 1 U.S. Military Academy (USMA).

Appendix A provides a comprehensive list, ordered by MACOM, of the 105 installations with onsite or contiguous TES, with corresponding information on scientific name, common name, Federal status, category, and occurrence. Point-of-contact information is also provided for each installation. Appendix B provides an alphabetic list of installations and the MACOMs where they are found.

Table 2. Installation and species summary information.

	Onsite	Contiguous	Total
Number of installations	93	12 ^a	105
Number of distinct species	194	51 ^b	245
Number of species occurrences	370	137 ^c	507

^a Does not occur onsite on any installation.

^b Number of distinct species that are only found contiguous to installations.

^c All occurrences of contiguous species.

Species Information

A total of 245 distinct TES (507 occurrences) were identified from the 105 installations reporting species. These include 194 distinct onsite species (370

occurrences), and 51 distinct species that are only found contiguous to installations (137 occurrences) (Table 2).

Of the 245 distinct species, 75% are Endangered, 16% are Threatened, 6% are Candidates, 2% are Proposed Endangered, and <1% are Proposed Threatened (Figure 1). By Category, 54% of the distinct TES are plants, 16% are birds, 7% are snails, 6% are mammals, 5% are reptiles, 4% are fish, 3% are clams, 2% are amphibians and insects, and 1% are crustaceans (Figure 2).

Appendix C lists the 245 distinct TES, with corresponding installations that each occurs on, in addition to whether or not critical habitat is designated for the installation.

Of the 105 installations that reported onsite or contiguous TES, 104 reported the presence of T&E species (Table 3). A total of 223 T&E species (470 occurrences) were identified from the 104 installations reporting T&E species. Of the 223 T&E species, 175 species (345 occurrences) were identified from 91 installations reporting onsite T&E species, while 48 species (125 occurrences) were identified from 13 installations reporting contiguous T&E species (Table 3).

Figure 1. Federal status, by distinct species and species occurrence, for onsite and contiguous species.

Figure 2. Distinct species, by category, for onsite and contiguous species.

Table 3. Threatened and Endangered species summary information.

	Onsite	Contiguous ^a	Total
Number of installations reporting T&E species	91	13	104
Number of distinct T&E species	175	48	223
Number of T&E species occurrences	345	125	470

^a Does not occur onsite on any installation.

Critical Habitat

Seventeen of the 245 TES (56 occurrences) are species that have been identified by the USFWS as having critical habitat. However, this does not mean that critical habitat has actually been designated on installations where these species occur, as critical habitat is designated for specific geographic locations and the installations may not fall within these areas. In fact, only two species were confirmed by installations as having critical habitat within the boundaries of an installation: the American peregrine falcon (Camp Smith), and the desert tortoise (Fort Irwin). Three contiguous TES were also designated as having

critical habitat: the whooping crane (Nebraska State Area Command [STARC-NE]), northern spotted owl (Fort Lewis), and the Mexican spotted owl (White Sands Missile Range).

Consultations and Biological Opinions

Installations reported a total of 626 informal consultations with the USFWS or NMFS in FY 1997. As a result of the formal consultation process, 32 Biological Opinions were rendered. Thirty-one of these were Non-Jeopardy Biological Opinions, and only 1 was a Jeopardy Biological Opinion.

Endangered Species Management Plans

Each installation is required to prepare an Endangered Species Management Plan (ESMP) for listed and proposed species and species with critical habitat. Of the 93 installations reporting onsite TES, 21 have a completed ESMP, 56 have a partially completed ESMP, 5 do not have an ESMP, and 1 ESMP required revision. In addition, 7 installations reported that they were not required to prepare an ESMP, and 3 installations did not respond. Of the 12 installations reporting only contiguous TES, 3 reported that their ESMP was partially complete, while 9 reported that they did not need an ESMP. See Appendix A for the ESMP status of each installation.

Planning Level Survey

Each installation is required to prepare a Planning Level Survey (PLS) to provide natural resource managers the basis to develop plans for continued training and mission requirements, and to meet stewardship goals. Of the 93 installations reporting onsite TES, 39 have a completed PLS, 46 have a partially completed PLS, 1 required revision, and 1 installation did not have a PLS. Of the remaining 7 installations, 3 reported that they were not required to prepare a PLS, and 3 installations did not respond. Of the 12 installations reporting only contiguous TES, 3 reported that they have a completed PLS, 5 have a partially completed PLS, and 4 installations reported that they were not required to prepare a PLS. See Appendix A for the PLS status of each installation.

Expenditures

A total of \$10,325K was spent for onsite TES in 1997. By category, expenditures for onsite TES include: \$7,773K for birds, \$823K for reptiles, \$766K for mammals, \$594K for plants, \$161K for insects, \$119K for fish, \$82K for crustaceans, \$6K for amphibians, and <\$1K for clams.

An additional \$320K was spent on contiguous TES in 1997. The breakdown by category includes: \$199K for birds, \$112K for insects, \$4K for mammals, \$3K for amphibians, and \$2K for fish.
